Profile

I design and ship AI systems you can check: distributed LLM inference with signed receipts, source-grounded answers, agents inside Claude Code, and automations that pull data from the real world. I measure before I promise and state plainly what a system does not prove.

Projects

SIMON

github.com/Szpili/SIMON

Verifiable LLM inference on untrusted, heterogeneous hardware.

- A Rust P2P network (libp2p, CBOR) dispatches jobs to nodes nobody controls centrally. Every job produces an Ed25519-signed receipt.
- An audit is one forward pass, measured at 2.4–9.9% of the job (median 7.4%). A receipt from an RTX 3090 was verified offline on a 2012 MacBook.

`Rust / libp2p / Ed25519 / vLLM / llama.cpp / inference verification`

Weryta and seventh-state

weryta.pl

Source-grounded AI answers and a rating vocabulary for claims.

- Each answer carries a label for how it relates to its source (e.g. ENTAILED) and a citation, for example from the Polish Journal of Laws. The fact store changes only on verified evidence.
- Veracity, framing and feeling are separate axes, and "I don't know" is a first-class answer. The Fairy Dice interface stores ratings in an append-only ledger.

`entailment / source verification / append-only ledger / PL and EN`

deepseek-workers

github.com/Szpilmenik/deepseek-workers

A Claude Code plugin that hands mechanical work to DeepSeek V4 models.

- The dsclaude wrapper runs claude -p against an Anthropic-compatible endpoint, and a routing rule in CLAUDE.md sends simple chunks of every session and subagent there.

`Claude Code / plugins and skills / DeepSeek API / cost routing`

HighScanner

highscanner.pl

A price tracker for medical cannabis in Polish pharmacies.

- Prices from patients' receipts (OCR) and public sources, an Android app and a Telegram bot. Website in Next.js 16 and Tailwind CSS 4 on Vercel.

`scrapers / OCR / Android / Telegram / Next.js`

Skola

skola.weryta.com

Class feedback on two axes instead of a single star.

- One tap on a 5×5 square, no account, a one-time vote token. QR codes for teachers, a PHP and MySQL backend.

`PHP / MySQL / QR / privacy / i18n`

Other projects

patoshi-forensics: a reanalysis of Bitcoin blocks 0–70,000; the popular nonce method has a 19.53% false-positive floor.

claude-desktop-ivy-bridge: Claude Desktop on pre-Haswell Macs (SIGILL, a Mach-O shim).

codex-intel-rebuilder: the Codex desktop app repackaged for Intel Macs (x64 Electron).

Mikrobotech AI: a private AI assistant with OAuth 2.0 access to Google services.

Skills

AI and LLMs
Claude Code (plugins, skills, subagents), Anthropic API, DeepSeek, vLLM, llama.cpp, Ollama, embeddings, inference and answer verification, routing work between models

Distributed systems
Rust, libp2p (gossipsub, request/response), Ed25519 signatures, CBOR, GPU (CUDA) and CPU inference

Web and apps
TypeScript, React, Next.js, Tailwind CSS, Electron, framework-free HTML, CSS and JavaScript, PHP, MySQL

Data and automation
Python, blockchain data analysis, scrapers, OCR, Telegram bots, OAuth 2.0, Google APIs

Infrastructure
Linux, macOS (Mach-O, launchd), Git and GitHub, GitHub Pages, Vercel, Cloudflare, Tailscale

How I work

> Only verified evidence changes what the system believes.

> Measure before promising. Withdraw any claim the data cannot defend.

> A cheap model for mechanics, a strong model for judgment.

> Keep what is true apart from what is liked.

Languages

Polish: native

English: fluent, including technical writing
